WHAT IS CLAIMED IS:

	1	1.	A method of detecting a metastatic colorectal cancer-associated		
	2	transcript in a cell from a patient, the method comprising contacting a biological sample from			
	3	the patient with a polynucleotide that selectively hybridizes to a sequence at least 80%			
	4	identical to a seque	identical to a sequence as shown in Tables 1-26.		
	1	2.	The method of claim 1, wherein the biological sample comprises		
2		isolated nucleic acids.			
	1	3.	The method of claim 1, wherein the polynucleotide is labeled.		
	1	4.	The method of claim 1, wherein the polynucleotide is immobilized on		
	2	a solid surface.	, , , , , , , , , , , , , , , , , , , ,		
<u>.</u>					
	1	5.	An isolated nucleic acid molecule consisting of a polynucleotide		
2 sequence as shown in Tables 1-26.			in Tables 1-26.		
	1	6.	An expression vector commission the available said of alabar 5		
	1	0.	An expression vector comprising the nucleic acid of claim 5.		
	1	7.	A host cell comprising the expression vector of claim 6.		
	1	8.	An isolated polypeptide which is encoded by a nucleic acid molecule		
1	2	having polynucleotide sequence as shown in Tables 1-26.			
	1	9.	An antibody that specifically binds a polypeptide of claim 8.		
	1	10.	The antibody of claim 10, which is an antibody fragment.		
1	1	11.	The antibody of claim 10, which is a humanized antibody		
1	l	12.	A method of detecting a metastatic colorectal cancer cell in a		
2	2	biological sample from	om a patient, the method comprising contacting the biological sample		
3	3	with an antibody of claim 9.			
1	l	13.	The method of claim 12, wherein the antibody is labeled.		
1	Į	14.	A method of detecting antibodies specific to metastatic colorectal		
2			he method comprising contacting a biological sample from the patient		
3		with a polypeptide encoded by a nucleic acid comprises a sequence from Tables 1-26.			
		pospersion of a nucleic acid comprises a sequence from Tables 1-20.			

colorectal cancer-associated polypeptide, the method comprising the steps of:

1

2

3

3

4

1

21.

15.

A method for identifying a compound that modulates a metastatic

The method of claim 21, wherein the antibody is labeled.

polypeptide in a cell from a patient, the method comprising contacting a biological sample

from the patient with a antibody that that specifically binds a polypeptide encoded by a

nucleic acid molecule having polynucleotide sequence as shown in Tables 1-26.
